AI Website Build Sprint

Theme 1: Build the Future — Solve a Real-World Problem

The Theme

Explore how technology and artificial intelligence can be used to address real-world challenges and create meaningful solutions. Think about how digital products can improve the way people live, learn, work, make decisions, or access services.

You have the freedom to explore any domain, identify an opportunity for improvement, and turn your idea into a useful digital product.

Innovation Is Open-Ended

You may build a platform, marketplace, intelligent assistant, automation tool, decision-support system, collaborative application, or an entirely new product concept.

There is no prescribed set of pages, features, or technology stack. You are encouraged to think creatively, experiment with new ideas, and explore unconventional approaches. Your solution should be driven by the opportunity you identify, not by a predefined template.

Final Objective

Build a functional, AI-powered web application that demonstrates your idea in action. Show how your solution creates value, who it benefits, and what makes it useful or different from existing alternatives.

Projects will be evaluated on real-world value, originality, functionality, user experience, effective AI integration, technical quality, and the quality of the final demonstration.

Theme 2: Reimagine Everyday Life : Make the Complex Simple

The Theme

Rethink how everyday activities, tasks, and experiences can be made simpler, smarter, and more efficient through technology. Explore opportunities to reduce unnecessary effort, improve convenience, simplify decision-making, or create better digital experiences.

Think beyond traditional websites and consider how intelligent applications can help people accomplish things more easily. You can explore any area of everyday life and imagine new ways of doing things.

Innovation Is Open-Ended

You may build a smart platform, personal assistant, productivity tool, intelligent planner, automation system, recommendation engine, or an entirely new product concept.

There are no restrictions on the domain, features, technology stack, or type of application. Be creative, challenge conventional approaches, and explore ideas that rethink how things are currently done. You can combine AI, data, automation, integrations, and interactive experiences in any way that supports your vision.

Final Objective

Build a functional web application that makes an activity, process, or experience meaningfully better. Demonstrate how users interact with your solution and explain what makes the experience simpler, more effective, or more valuable than existing approaches.

Projects will be evaluated on usefulness, creativity, functionality, user experience, effective technology integration, technical quality, and the quality of the final demonstration.

Theme 3: Beyond the Screen: Build for a Smarter, More Inclusive Future

The Theme

Imagine how technology can create a better future for individuals, communities, and society. Explore how digital innovation can improve accessibility, expand opportunities, encourage sustainability, support inclusion, and help people make more informed decisions.

Think about how AI and technology can make services more accessible, resources more useful, experiences more inclusive, and positive change easier to achieve. You are free to explore any area where innovation can contribute to a meaningful impact.

Innovation Is Open-Ended

You may build a social-impact platform, accessibility solution, intelligent service, community application, sustainability tool, decision-support system, or an entirely new product concept.

There is no prescribed problem, application type, feature set, or technology stack. Think creatively, explore unconventional ideas, and challenge the boundaries of what technology can

do. Your solution can focus on an individual, a community, an organization, or a broader societal need.

Final Objective

Build a functional web application that demonstrates how technology can create meaningful and positive change. Show how people can use your solution, the value it provides, and its potential to improve experiences, opportunities, or outcomes.

Projects will be evaluated on potential impact, originality, functionality, user experience, effective AI integration, accessibility, responsible design, technical quality, and the quality of the final demonstration.

S.No	Theme	What it means	Core idea
1.	Build the Future: Solve a Real-World Problem	Improve an existing application, service, or process by making it smarter, more useful, or more effective with AI.	Improve what exists.
2.	Reimagine Everyday Life Make the Complex Simple	Create a new application or digital product that helps people do something useful in a new or better way.	Create something new.
3.	Beyond the Screen: Build for a Smarter, More Inclusive Future	Build a solution focused on creating positive social, environmental, accessibility, or community impact.	Create meaningful impact.
